

# Code Build Instructions

## Flashing Device

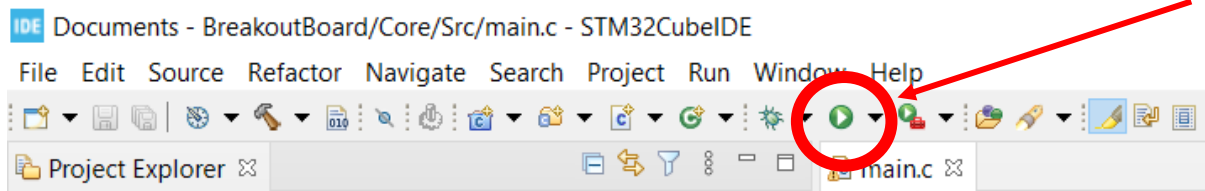

Open Folder \*NAME\* and run the “.cproject” file. This will open the STMCube IDE.

Select Your desired Workspace and launch

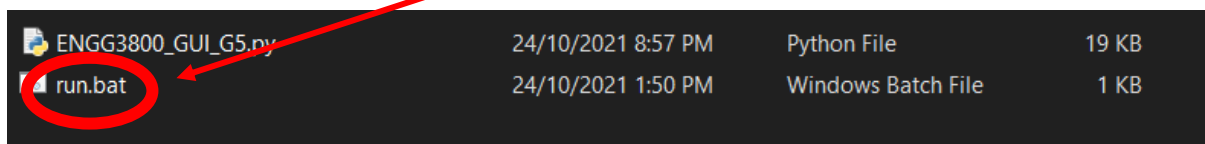

At the top of the screen under the navigation bar there is a “Play button”. Click this to program the device.

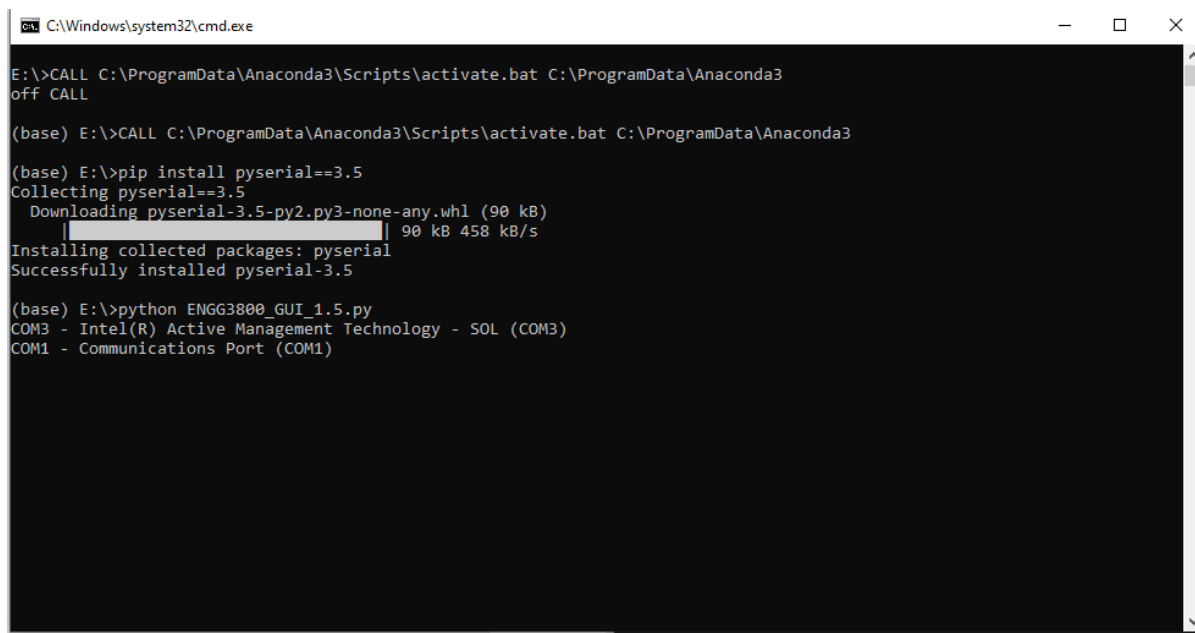

Wait for the build to complete.

## Running GUI

Insert USB and run the “.bat” script

The script should install the required libraries and open the GUI

The GUI should display like below. Select a COM port and the PC should begin communication with the DMulti over IR Communication.
